

Powerful Synergies

**COPMA**  
950

TOP RANGE  
MODEL

**950 HAS COMPACT DIMENSIONS  
AND OPTIMIZED WEIGHTS WITH A  
CUSTOMIZED DESIGN FOR MORE  
POWER AND RELIABILITY AT  
EVERY OPERATOR NEED.**

- **TOP RANGE - HEAVY RANGE model, over 90 Ton/Mt**
- High tensile strength steel
- Efficient safety system
- Reliability, speed and precision
- Extra long working life cycle
- Easier maintenance operations

**THE MOST  
POWERFUL  
CRANE FOR  
THE TOUGHEST  
MARKETS**

# COPMA 950

## More Safety & Security

**DESIGNED WITH THE HIGHEST HYDRAULIC SYSTEMS AND THE TOUGHEST STRUCTURAL STEEL TO PERFORM THE MAXIMUM LIFTING CAPACITY.**

- Superior Hydraulic Technology
- Dynamic Electronic Controls
- High Degree of User Friendliness
- Efficiency and Reliability thanks to superior structural features
- More Efficiency with advanced electronic controls

# DESIGNED FOR FLEXIBLE SERVICES

# COPMA 950

## Technical Features

**CUTTING EDGE FEATURES  
FOR MAXIMUM LIFTING  
POWER, STABILITY AND  
OPERATIONAL SAFETY IN EVERY  
WORKING CONDITION.**

### Standard features

- easy use

- control

- structure

### optional features

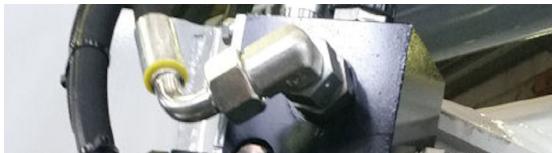

- control

\* CE version

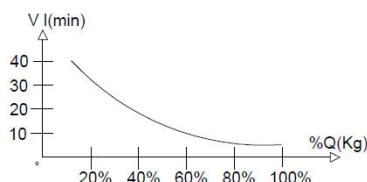

## HSE easy use High Speed Extension

Hydraulic system for reducing load losses and bottlenecks for the correct output sequence of the extensions by increasing the speed of 30%-60% thanks to the regenerative valve. Greater continuous performance thanks to lower fluid temperature.

## HPVe easy use High Power Velocity Electronic

A valve electronically manages the flow of oil to the distributor by increasing the load capacity of the crane and intervening on the lifting speed. Allowing the reduction of dynamic effects while optimizing performance.

## TAD control Transport Alert Device

Sensors on the basement guarantee the correct closing of the beams and a column switch sensor indicates if the crane is in a folded position, no more than 4 Mt in height. The operator is warned with light and sound signals in the truck cabin.

## CMS 2.0 control Crane Monitoring System 2.0

Crane stability control system TES2-TES3 with safety and overload controls and HPVE lifting speed management. Active control on 4-8 working areas according to the model and vehicle stability requirements.

## CCLS structure Constant Control Link

The cranes equipped with connecting rods on the articulations, with a constant lifting moment over the entire working arc, allow to 100% optimize the crane's capacity in positions close to the maximum vertical.

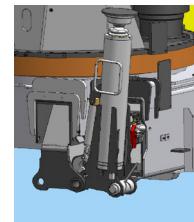

## ERD easy use Electronic Radio Display

A display on the remote control allows the operator to maintain the total control of all the crane functions in real time by managing the work mode, the stability control, and oversee any maintenance and diagnostic messages.

## HLS 2.0 easy use Hydraulic Lifting Stabilizers 2.0

The stabilizer cylinder is lifted thanks to an auxiliary jack, allowing the vertical movement inside a bush or a rotation around a pin. This easy use system saves time and allows an efficient stabilizer set up.

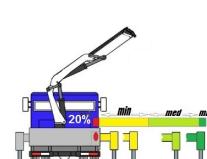

## RRC 3.0 control Radio Remote Control 3.0

Radio control with directly flanged actuation electronics with proportional distribution. The remote control allows operating the crane while constantly monitoring the areas of operation.

## TES 3.0 control Truck Electronic Stability 3.0

Active stability control for performance optimization according to the type of stabilization to guarantee maximum safety in all working conditions. Mandatory in the CE market, it helps a better vehicle-crane configuration.

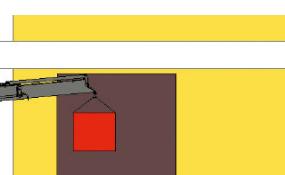

## Negative Control System

Slope sensors mounted on the articulated booms of the crane, combined with the electronic control, manage the maximum vertical angle of the arms and the JIB preventing incorrect or dangerous movements by the operator.

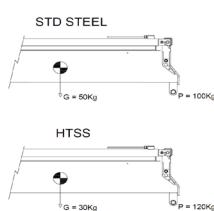

## Negative Boom System

The linkage on the articulation of the secondary boom permits the introduction of loads within restricted spaces. It enables the recovery of the deflection of the extension boom group due to the weight and the load raised on the extensions.

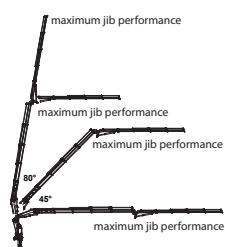

## High Tensile Strength Steel

The entire high-strength steel structure thanks to an advanced FEM engineering process, develops an extraordinarily light and performing crane structure. In the perfect balance between maximum performance and operational safety.

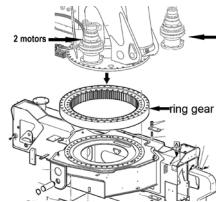

## Power Jib Monitoring

The PJM system guarantees to operate with the maximum performance in every working condition thanks to a dynamic variation of the maximum pressure according to the crane arm angles.

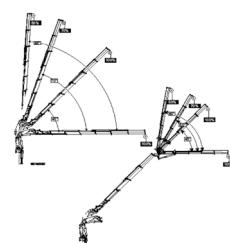

## Rotation Endless System 2.0

Rotating system with bearing and double gearbox, equipped with clearance adjusting system with eccentric shaft. It provides the perfect transmission of the rotation with the bearing.

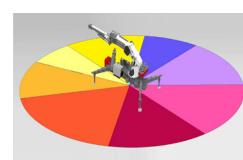

## Winch Linear Control

The winch linear electronic control allows pulling the rope according to the working angle of the crane and the JIB . It optimizes the load control and makes every movement easier and safer.

## Crane Monitoring System 3.0

Crane stability control system TES2-TES3, with safety and overload controls medium high-range crane and HPVE lifting speed management. Active control on 4-8 working areas according to the model and vehicle stability requirements.

## COPMA® Remote Connectivity 4.0

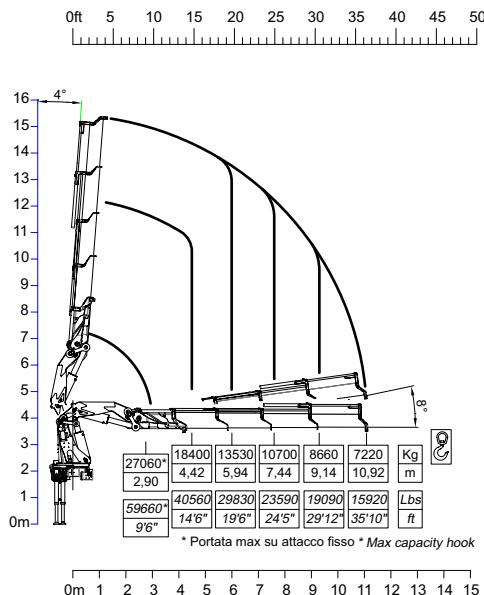

COPMA® Remote Connectivity 4.0 to the crane. Two-way communication by GPRS for real-time diagnosis and remote real-time parameter setting and/or adjustment.
